Slakeski N; Reynolds EC, Obrien-Simpson NM,

WPI; 1999-024043/02.

Immunogenic composition containing new Porphyromonas gingivalis peptides - and related antibodies, useful for treatment, prevention and diagnosis of peridontal disease.

Claim 1; Page 49; 70pp; English.

Peptides AAW83070-122 are derived from the 300 kD multiprotein complex of cysteine proteinases and adhesins. The 300kDa multiprotein complex is the major virulence factor of Porphyromonas gingivalis. The specification describes a composition for raising an immune response against P. gingivalis which contains at least one of the present peptides. The products are used to treat and prevent P. gingivalis infection (periodontal disease). Antibodies are used for passive immunisation, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a fragment of the PrtIIR45 Arginine specific proteinase of Porphyromonas gingivalis. The specification describes peptides derived from the 300 kD multiprotein complex of cysteine proteinases and adhesins. The 300 kD multiprotein complex is the major virulence factor of P. gingivalis. The specification describes a composition for rasing an immune response against P. gingivalis which contains at least one of the present peptides. The products are used to treat and prevent P. gingivalis infection (periodontal disease). Antibodies are used for passive immunisation, and as diagnostic reagents for P. gingivalis in subgingival plaque. The peptides are used to detect P. gingivalis specific antibodies in serum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The present sequence represents a fragment of the PrtIIR50 Arginine specific proteinase of Porphyromonas gingivalis. The specification describes peptides derived from the 300 kD multiprotein complex of crysteine proteinases and adhesins. The 300kDa multiprotein complex is the major virulence factor of P. gingivalis. The specification describes a composition for raising an immune response against P. gingivalis which contains at least one of the present peptides. The products are used to treat and prevent P. gingivalis infection (periodontal disease). Antibodies are used for passive immunisation, and as diagnostic reagents for P. gingivalis in subgingival plaque. The peptides are used to detect P. gingivalis specific antibodies in serum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Immunogenic composition containing new Porphyromonas gingivalis peptides - and related antibodies, useful for treatment, prevention and diagnosis of peridontal disease.

Comprises a 300 kDa complex composed a 45 kDa arginivalis (PG)

Comprises a 300 kDa complex composed a 45 kDa arginine-specific thiol

profease and 44, 15, 17 and 27 kDa adhesins encoded by the ptrR gene

(AAT78850), and a 148 kDa lysine-specific thiol protease and 39, 15 and

44 kDa adhesins (see AAW24787) encoded by the ptrK gene (AAT78851). A

camplex of PtrR and PtrK each containing at least one adhesin domain, the

complex having a mol.wt. of over 200 kDa, and preferably comprises all 9

proteins of the PtrR-PtrK complex (see also AAW24780-85). It can be used

the adjamed composition to elivit an immune response directed against

PG, and in a claimed method of reducing the prospect of PG infection

and/or severity of disease. Antibodies directed against the complex are

previously prepared antigens based on fimbriae or the capsule, the PtrR-

PtrK complex or component parts are safe and effective antigens. (Updated

on 17-OCT-2003 to standardise OS field)

The invention relates to an isolated immunogenic Porphyromonas gingivalis to polypeptide (I) comprising (a) a polypeptide at least about 5 contiguous amino acids of an amino acid sequence appearing as AD210384 - AD210443, AD210445 - AD210489 or AD210480-AD210571, (b) the polypeptide of (a) and and acids of an amino acid sequence selected from AD210445 - AD210478 or AD210480-AD210571. Also included are an isolated polymucleotide (comprising a sequence operably included are an isolated polymucleotide (comprising a sequence operably linked to the polymucleotide, a nexpression control sequence operably linked to the polymucleotide, an expression wector comprising the comprising the expression vector, an antibody cannot be not call comprising the expression vector, an antibody (antibody fragment, or single-chain antibody) that specifically binds to the polymptide, a composition comprising the antibody (antibody carrier, creating or preventing a disease/infection caused by Porphyromonas (c) the polymucleotide) and a pharmaceutical carrier, eliciting an immune response in an animal, detecting the presence of a P. Copymucleotide in a test sample, detecting the presence of a P. Copymucleotide in a test sample, detecting the presence of a P. Copymucleotide in a test sample, detecting the presence of a P. Copymucleotide in a test sample, detecting the presence of a P. Copymucleotide in a test sample, detecting the presence of a P. Copymucleotide in a test sample, detecting the presence of a P. Copymucleotide in a test sample, detecting the presence of a P. Copymucleotide in a test sample, detecting the presence of a P. Copymucleotide in a test sample, detecting the presence of a P. Copymucleotide in a test sample, detecting the presence of a P. Copymucleotide in a test sample, detecting the presence of a P. Copymucleotide in a test sample, detecting the presence of a P. Copymucleotide in a test sample, detecting the presence of a P. Copymucleotide in a test sample, as useful for the diseases and infections caused by P. Gi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mouth disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated immunogenic polypeptide, useful for diagnosing, treating,
                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    preventing, or ameliorating diseases and infections caused by Porphyromonas gingivalis e.g. localized prepubertal periodontitis

Also included are an isolated polynucleotide (comprising a sequence that encodes (I) (a), (b) or (c)), an expression control sequence operably linked to the polynucleotide above (or the polynucleotide above and a heterologous polynucleotide), an expression vector comprising the polynucleotide, a host cell comprising the expression vector, an antibody (antibody fragment, or single-chain antibody) that specifically binds to the polypeptide, a composition comprising the antibody (antibody fragment, or single-chain antibody) and a pharmaceutical carrier,

                                                                                                                                                                                                                                                                                                                                                                                              Vaccine, enzyme; therapy, diagnosis; periodontal disease; antiinflammatory; mouth disease; gingivitis; inflammation; mouth disease; endocarditis; cardiant, cardiovascular disease; inflammation; bacterial urinary tract infection; antibacterial; uropathic; genitourinary disease; infection; osteomyelitis; osteopathic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            invention relates to an isolated immunogenic Porphyromonas gingivalis
prepubertal periodontitis, generalized prepubertal periodontitis, localized juvenile periodontitis, rapidly progressive adult periodontitis, refractory adult periodontitis, endocarditis, thyroid gland abscess, urinary tract infection, brain abscess, or vertebral osteomyelitis. The present sequence is a P. gingivalis immunogenic protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated immunogenic polypeptide, useful for diagnosing, treating, preventing, or ameliorating diseases and infections caused by

gingivalis, a composition comprising the isolated immunogenic polypeptide (or the polynucleotide) and a pharmaceutical carrier, eliciting an immune response in an animal, detecting the presence of a first P. gingivalis polymucleotide in a test sample, detecting the presence of a P. cingivalis antibody in a test sample, detecting the presence of P. gingivalis (or a P. gingivalis polypeptide) in a test sample, detecting the presence of P. gingivalis (or a P. gingivalis polypeptide) in a test sample, detecting P. gingivalis in a subject and detecting P. gingivalis in a subject. The immunogenic polypeptide is useful for the diagnosis, treatment, prevention, and amelioration of diseases and infections caused by P. gingivalis. It is useful for treating or preventing localized prepubertal periodontitis, generalized prepubertal periodontitis, capital progressive adult periodontitis, refractory adult periodontitis, endocarditis, thyroid gland abscess, urinary tract infection, brain abscess, urknary tract infection, brain abscess, urknary tract infection, brain abscess, usinary tract infection, brain

gingivalis, a composition comprising the isolated immunogenic polypeptide (or the polymucleotide) and a pharmaceutical carrier, eliciting an immune response in an animal, detecting the presence of a first P. gingivalis polymucleotide in a test sample, detecting the presence of a P. gingivalis antibody in a test sample, detecting the presence of P. gingivalis (or a P. gingivalis polypeptide) in a test sample, detecting to gingivalis in a test sample, detecting p. gingivalis in a subject. The immunogenic polypeptide is useful for the diagnosis, creatment, prevention, and amelioration of diseases and infections caused by P. gingivalis. It is useful for treatment periodontitis, generalized prepubertal periodontitis, generalized juvenile periodontitis, carpidly progressive adult periodontitis, refractory adult periodontitis, capically progressive adult periodontitis, refractory adult periodontitis, cabscess, or vertebral osteomyelitis. The present sequence is a P. and the present sequence is a P. and the present sequence is a P. and the present sequence is a P. and the present sequence is a P. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present sequence is a p. and the present

New isolated immunogenic polypeptide, useful for diagnosing, treating

The invention relates to an isolated immunogenic Porphyromonas gingivalis to polypeptide (I) comprising (a) a polypeptide at least about 5 contiguous amino acids of an amino acids sequence appearing as AD210443.

AD210445 - AD210448 or AD210480-AD210571, (b) the polypeptide of (a) and a heterologous polypeptide or (c) an amino acid sequence selected from a heterologous polypeptide or (c) an amino acid sequence selected from a heterologous polypeptide or (c), an expression control sequence that encodes (I) (a), (b) or (c)), an expression control sequence operably concluded at an isolated polymucleotide above [c] innked to the polymucleotide above [c] innked to the polymucleotide above [c] innked to the polymucleotide above [c] innked to the polymucleotide above [c] innked to the polymucleotide above [c] innked to the polymucleotide above [c] innked to the polymucleotide above [c] innked to the polymucleotide above [c] innked to the polymucleotide above [c] innked to the polymucleotide above [c] innked to the polymucleotide above [c] innked to the polymucleotide above [c] innked to the polymucleotide above [c] inntibody [c] innked to the polymucleotide above [c] inntibody [c] innked to the polymucleotide [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] inner [c] preventing, or ameliorating diseases and infections caused by Porphyromonas gingivalis e.g. localized prepubertal periodontitis.                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is gingipain R (RgpB) from Porphyromonas gingivalis. Gingipain R is a cysteine protease and plays a pivotal role in the aetiology of peridontitis. The crystal structure of the present protein is useful to obtain crystal structure data for the design and/or identification of gingipain R inhibitors, using a computer aided modelling program. The identified gingipain R inhibitors are useful for the treatment and/or prevention of periodontal diseases, especially periodontitis, and/or cardiovascular diseases that occur after a primary
                                                                                                                                                                                                                                       New crystal structure of gingipain R useful to obtain crystal structure data for design and/or identification of gingipain R inhibitors useful for treatment and/or prevention of periodontitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Porphyromonas gingivalis 95 kDa RgpA protein 50 kDa catalytic domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                  The present invention relates to a computational method (M1) for clantifying adhesin and adhesin-like proteins, by computing the sequence identifying adhesin and adhesin-like proteins, by computing the sequence content in the computed five attributes, and identifying the adhesin and adhesin-like proteins having probability of being an adhesin and adhesin-like proteins, having 214 annotated genes concoding adhesin and adhesin-like proteins, having 274 fully defined 162-concoding adhesin and adhesin-like proteins, having 274 annotated genes encoding adhesin and adhesin-like proteins, having 105 fully defined 162-concoding adhesin and adhesin-like proteins, having 105 fully defined 306-18876 base pairs (SEQ ID NO: 659-763); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 306-1897 sequences; and a fully connected multilayer feed forward ANN (I) cased on (M1). (M1) is useful for identifying adhesin and adhesin-like proteins, of therapeutic potential, and identifying and adhesin-like proteins for further testing in development of new vaccine formulations consecuted adhesins and adhesin-like proteins for further testing in development of new vaccine formulations consecuted and unimary declarases caused by various pathogenic organisms. (M1) is capable for distantly related organisms, and from bacteria belonging to a wide distantly related organisms, and from bacteria belonging to a wide phylosenetic spectrum. (M1) is capable of predicting adhesin adhesin contribution and adhesin adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin and adhesin adhesin and adhesin adhesin adhesin and adhesin adhesin adhesin adhesin 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                  ó
                                C (APC) in a medium comprising protein C. The method involves confacting the medium with an arginine-specific cysteine proteinase, referred as RgpA (also referred as 95-kDa gingipain R (HRGP)) and RgpB (also referred as 50 kDa-gingipain R (RGP-2)) of bacterial origin. The composition and methods are useful in controlling blood coagulation or in treating espticaemia or disseminated intravascular coagulation in patients. The invention is also used in gene therapy. The present sequence is Porphyromonas gingivalis 95 kDa RgpA protein 50 kDa catalytic domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel periodontal disease marker for detecting periodontal disease. The marker comprises a cysteine protease derived from a Porphyromonas gingivalis microbe. The invention further comprises: a periodontal disease ward appearance kit, comprising a sampling tool, periodontal disease marker, synthetic substrate, buffer, and a reducing agent. The periodontal disease marker is useful for detecting and diagnosing periodontal disease from saliva. The periodontal disease marker provides reliable and convenient detection of periodontal disease, and provides simultaneous detection of angina and diabetes. This sequence represents a human cysteine protease related protein of the invention.
                  present invention relates to a method of producing activated protein
                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel periodontal disease marker for detecting periodontal disease, comprising cysteine protease derived from Porphyromonas gingivalis, useful for detecting periodontal disease, in saliva.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                selectable marker, periodontal disease, angina, antianginal; cardiovascular disease; diabetes; antidiabetic; cysteine protease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a method of producing activated protein C (APC) in a medium comprising protein C. The method involves contacting the medium with an arginine-specific cysteine proteinase, referred as RgpA (also referred as 95-kDa gingipain R (RRGP)) and RgpB (also referred as as 50 kDa-gingipain R (RGP-2)) of bacterial origin. The composition and methods are useful in controlling blood coagulation or in treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A low mol.wt. arginine-specific gingipain (AG-1) and high mol.wt. AG (AG-2) were isolated from P. gingivalis strains H66 (ATCC 33277) and W50 (ATCC 53973). The sequences of the proteins were used to design PCR primers and probes to isolate AG DNA. Lambda DASH and lambda ZAP libraries were screened with a probe based on amino acids 11-22 of the AG protein to obtain DNA encoding AG-1 (AAQ83484) and AG-2 (AAQ83489). (Updated on 25-WAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                   The present sequence represents an arginine-specific protease of Porphyromonas gingivalis. The following peptides, derived from Arg- and Lys-specific high molecular weight proteases, offer proteaction against infection: YTYTVRDGK IKEGLTATE DECVATGNHE YCVEKTAGS VSPKVC (1); YTPVEEKONG RMIVIVAKKY (11); QLPFIFDVAC VNGDFLFSNP CFABALMRAQ (111); GENPYQPVS NITATTOGCK VITKWADASFTK (IV); GMRHEXVEEKY YTAGVSFKVC KDTVV (V); RNFMNYEDGR YTPVEEKONG (VI); YTKKEGLTAT TREEDGVARG NMEYCVCVKY TAGVSPKVC (VIII); YTYTVYRDG TKIKEGLTATTFEEDGV ATGN (X); KIKEGLTATT FEBEDGVARGH HZY (XII); KWDAPNGTPN PNPN POPTPLES (XII); and YTPVEEKENG RMIVIVAKKY (XII); They are used in vaccines to protect animals, including humans, from gingivitis and/or periodontal diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                          August 25, 2006, 18:04:46; Search time 34.6744 Seconds (without alignments) 53.012 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 332, Sequence 7, App

Sequence 10, Application US/08353485

Patent No. 5830710

GRNERAL INFORMATION:

APPLICANT: The regular Canying

APPLICANT: Lepine, Guylaine

APPLICANT: Lepine, Guylaine

APPLICANT: Lantz, Marilyn

APPLICANT: Lantz, Marilyn

APPLICANT: Lantz, Marilyn

APPLICANT: Lantz, Marilyn

TITLE OF INVENTION: Cloned Porphyromonas gingivalis Genes

TITLE OF INVENTION: and Probes for the Detection of Periodontal Disease

NUMBER OF SEQUENCES: 12

CORRESPED MEENSES:

ADDRESSEE: Ted W. Whitlock

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description

GENERAL INFORMATION:

SEQUENCE 239, Application US/10915002

Publication No. US20060078950A1

GENERAL INFORMATION:

APPLICANT: Progulake-Pox, Ann

APPLICANT: Hillman, Jeffrey D.

APPLICANT: Handfield, Markin

TITLE OF INVENTION: USE IN DIAGNOSIS ANTIGENS FOR USE IN THE DIAGNOSIS, TREATMENT, PRILE REFERENCE: 02-042

TITLE OF INVENTION: DERIODONTAL DISEASES

TITLE REFERENCE: 02-042

CURRENT APPLICATION NUMBER: US/10/915,002

CURRENT FILING DATE: 2004-08-10

NUMBER OF SEQ ID NOS: 354

SSOTIAND NOS: 354

SSOTIAND NOS: 334
